- **Interchangeable Lenses:** This is the defining characteristic. The ability to swap lenses allows photographers to adapt to various shooting situations, from wide-angle landscapes to close-up portraits. Finding original Sears lenses for this model might be challenging, but understanding the lens mount allows for potential adaptation with lenses from other manufacturers (requiring careful research and potential modifications).
- **Automatic Exposure:** Unlike fully manual cameras, this model features an automatic exposure system. This simplifies photography, especially for beginners, by automatically adjusting the shutter speed and aperture to achieve a correctly exposed image. However, understanding the limitations of this automatic system is crucial for consistently good results. The camera likely employs a CdS (Cadmium Sulphide) light meter, which might be less accurate than modern systems.
