Frequently Asked Questions (FAQs)

Q1: My Polaris AutoClear is not moving. What should I do?

A1: First, check your pool pump to ensure it is running and generating sufficient pressure. Inspect the filter bag for clogs – a blocked filter will severely restrict the water flow needed to power the cleaner. Examine all hoses for kinks or blockages. Finally, check the intake and discharge ports of the cleaner itself for any debris. Your Polaris AutoClear manual's troubleshooting section offers more specific guidance.

Q2: How often should I clean the filter bag?

A4: Inspect all hose connections and couplings for tightness. Check for cracks or damage in the hoses themselves. If the leak persists, you may need to replace a damaged component. Consult your Polaris AutoClear manual or contact customer support.

Q5: How do I winterize my Polaris AutoClear?

A5: The winterizing process is crucial to prevent damage from freezing. Your Polaris AutoClear manual will provide specific instructions, usually involving draining all water from the cleaner and storing it in a protected area.
