A1: For hardwood floors, a random orbital sander is generally recommended. These sanders offer a more controlled and less aggressive sanding action, minimizing the risk of gouging or damaging the wood. Belt sanders are more powerful but should be used cautiously on hardwood to prevent excessive material removal.

Q2: How often should I replace the sanding pads on my Black & Decker sander?

A2: The frequency of pad replacement depends on the intensity of use and the type of pad. However, as a general rule, replace sanding pads when they become clogged with dust or show significant wear, compromising their effectiveness. Inspect them regularly for even wear and tear.

Q3: Can I use a Black & Decker polisher on all types of flooring?

Q4: What safety precautions should I take when using Black & Decker flooring tools?

A4: Always wear safety glasses or a face shield to protect your eyes from flying debris. Use a dust mask or respirator to avoid inhaling dust particles, especially during sanding. Q5: How do I clean my Black & Decker wet/dry vacuum after using it for a flooring project?
