The NX2000 boasts a range of features that make it a compelling option, particularly for photographers looking for a step up from point-and-shoot cameras without the hefty price tag of professional DSLRs. Its key features include:

- **16.3MP APS-C CMOS Sensor:** This sensor size provides excellent image quality, particularly in low-light conditions, delivering sharper images than smaller sensors found in many compact cameras. It excels in capturing detail and producing pleasing bokeh (background blur).
- **3-inch Tilting Touchscreen:** The tilting touchscreen allows for easy composition from various angles, including low shots and overhead perspectives. Its touchscreen interface makes navigating the menus and settings intuitive and user-friendly. This feature significantly enhances usability compared to cameras relying solely on buttons and dials.
- **Hybrid Autofocus System:** The NX2000 uses a hybrid autofocus system combining phase-detection and contrast-detection autofocus, providing fast and accurate focusing in most situations. This system performs well in both static and moving subject scenarios.
- **Full HD Video Recording:** Capture high-definition video at 1080p resolution, perfect for capturing memorable moments in crisp detail. While not its primary strength, the video capabilities are more than adequate for casual use.
- **Wi-Fi Connectivity:** Share your photos and videos wirelessly to your smartphone, tablet, or computer. - **Program Mode (P):** Offers more control than Auto mode, allowing you to adjust settings like ISO and aperture while the camera manages shutter speed.
- **Aperture Priority (A):** You control the aperture (controlling depth of field), and the camera selects the appropriate shutter speed. This is excellent for controlling background blur.
- **Shutter Priority (S):** You control the shutter speed (useful for freezing motion or creating motion blur), and the camera sets the aperture.
